

SharePoint Online—loaded with new features.

Microsoft's major investment in its products has certainly paid off for SharePoint Online in Office365. The powerful new platform opens a world of possibilities.

New capabilities that can impact your organization

- Deep insights into the organization through Access Services, Excel Services and InfoPath Services.
- Extend the reach of your knowledge through extranet access to partners and vendors.
- Reduce expense by unifying on a common content management platform. One that effectively supports your content management lifecycle including content retention policies, workflow and legal holds.
- Evergreen upgrades for new and existing features that become available to you as soon as they are launched. No more need to apply patches or perform updates to multiple systems.

The Power of Choice

Microsoft leads the industry by providing customers greater flexibility to deploy its enterprise grade software in a myriad of models. Whether running in Microsoft’s cloud, with an IaaS provider or in your datacenter, Microsoft can deliver a robust platform for collaboration. You can choose the deployment location that’s best for you.

You even have choices about what you use with SharePoint Online in Office365. Do you just need document management and sharing with team collaboration? You can just buy that. Do you need deeper insights into your business with Office-based analytics? You can add that too.

And Microsoft continues to improve the quality and features of the SharePoint Online experience. As you can see in the nearby table, the functional completeness of Office365, as compared with the on-premise SharePoint, is much closer than the prior version. All that additional functionality is covered under your subscription license; this is the value of evergreen updates. No patches to apply. No servers to monitor and troubleshoot. You can stay focused on running your business and let Microsoft deliver a secure and stable collaboration platform.

Capabilities that deliver results

Put these capabilities to work for your organization, delivered quickly to your organization using Microsoft Online.

Deeper insights

Share organizational knowledge currently locked-up on the desktop with other stakeholders. Excel Services, Access Services and Forms Services give users the ability to quickly share their insights.

Extending to partners

Real-time collaboration with these key stakeholders is becoming more critical. SharePoint Online supports secure access

Reduced cost by consolidating

Manage content in a single source repository with options for records management tools while keeping information secure.

Evergreen upgrades

New features are being developed and deployed every day. Have instant access to these features and stop worrying about supporting outdated systems.

On-Demand capacity

With SharePoint Online, capacity limitations are a thing of the past. The environment will grow with the content as needed to be able to better serve your needs.

“Avanade, one of our leading enterprise partners, is helping our customers shape the journey to BPOS successfully, driving real business value and proven cost savings.” — **Geoff Nyheim**
Vice President, Business Online Services Worldwide Sales and Partners, Microsoft Corporation
