

Financial Services Risk Modernization

Accelerate your Modern Risk Management Development

19%

executives report that complying with growing and changing regulations remains a significant challenge

31%

executives report that implementing new technology is a top three investment priority for their organization in 2020

Source: PwC Capital Markets 2020 Survey

Our holistic Financial Services (FS) Risk Modernization helps clients keep up with emerging risks and threats facing businesses. We help build a modern platform that:

- Addresses risk governance through an agile and flexible approach to risk modeling
- Leverages modern compute to analyze years of historical data and continuously assess/monitor risk
- Streamlines and accelerates model compliance and data transparency to regulators

Key strategic business outcomes

Improve timeliness and reliability

A modern risk management platform helps identify new ways of looking at your data to realize improved outcomes.

Quickly identify emerging needs

Our scalable, agile approach replaces historical analysis and allows your organization to be more responsive to emerging needs.

Reduce Costs

Consumption based economic model (OpEx vs. CapEx) to align costs to usage, control expenses, and streamline operations.
