Redefine the workplace experience, without the risk

Avanade’s Secure Workplace solution
The workplace is the new frontier of competitive advantage

Employees are no longer shackled behind corporate-owned desktops and firewalls. The proliferation of mobility, new tools and technologies allows employees to work in innovative new ways, creating immense productivity opportunities.

Benefits of a secure workplace:
• Drive productivity: Empower internal and third-party users to work together securely, providing a seamless, collaborative environment that drives productivity and creativity.
• Protect data and information: Leverage encryption and access controls, without hindering productivity, to meet compliance and regulatory needs.

Avanade’s end-to-end capabilities help build, run and sustain a secure workplace

+50% of business travelers use insecure public Wi-Fi connections – Forrester

What is the Avanade Secure Workplace solution?

From upfront gap analysis and road mapping, to building, running and managed support, our comprehensive approach weaves security into every facet of your workplace experience. This drives productivity, protects data and gives your IT department time to focus on critical priorities.

Security underpins the workplace experience

Enterprises are experiencing an explosive rise in data, cloud applications and mobility, drastically increasing the surface of attack and management complexity. Meanwhile, the need to maximize productivity and operations is driving riskier behaviors, unmonitored applications and shadow IT. With the rise of AI-powered malware and more advanced cyberattacks, a robust security posture and a deeply engrained security culture are essential.

A new approach is needed

Organizations also struggle with a lack of security awareness among end-users and the inability to stay ahead of sophisticated, ubiquitous security challenges, due to limited resources and a lack of in-house expertise. Cybersecurity teams need an advanced, simple solution, one that won’t break the user experience or cause complexity with multiple, disconnected tools.

Avanade’s Secure Workplace solution:

We help you design and maintain a robust security posture, modernize your applications with an evergreen platform and create a thriving security culture across your organization. Our holistic solution spans four key security requirements, including:

- Identity and access management
- Information protection
- Threat protection
- Security management

From start to finish, our Microsoft 365 and Azure expertise and certified partnerships – with Symantec, Tanium, CyberArk, Okta, SailPoint and many others – help you build and secure your modern workplace.

Only 33% of employees report receiving training on how to stay secure at work – Forrester²

Less than half of companies have a consistent, company-wide encryption strategy – Ponemon Institute³
