Sustainability Smart Hub

The best-in-class platform to manage the performance and trends of your sustainability efforts and how they support your strategic objectives.

Ingest

Easy configuration of all structured and non structured data sources, using a parametric ingestion module:

- Connect to structured and unstructured data sources
- Integrate via API to your services (SAP, SF, Rest. etc.)
- Import from Social Networks

Model

Prepare data for visual presentation with automatic dynamic model:

- Start from industry model and extend to include your own KPIs
- Parametric visual settings
- Configurable dimensions (e.g. GRI domains, Buildings, Geographic Locations, Sentiment)

Represent

Data analysis through an intuitive modern web app allow to:

- Measure SDGs' contribution and controls completeness
- Analyse Sentiment for brand and material topics
- Advanced Reporting and Export Capabilities

avanade

Visualize your Performance

SDGs' EVALUATION

Visualize your KPI framework, monitor completion of your plan and gauge your contribution to the **sustainability development goals**. Manage your performance and enrich your non financial statement with the evidence of data.

SENTIMENT ANALYSIS

Monitor positive and negative sentiment for relevant domains, uncover details on **word impact**, the daily **distribution of words** in text and **industry or market influencing sites for each topic**.

IoT MAPPING

Improve control on your value chain, connect your products or industrial platform and delve into **interactive maps and visuals** for every relevant metric. Select a location, a building, a sensor and monitor detailed and aggregate information to uncover trends.

Why choose Sustainability Smart Hub

Completeness

- Full information on Sustainability
- Integrated with social sentiment
- Useful interactive maps

Integration

- Modular and extensible
- Data from multiple sources
- Easy to configure

Customization

- Define your KPI universe
- Customizable visual
- Expandable report
