

Global Delivery Network

Avanade's approach to multi-site delivery brings customers unique benefits through delivery options that can include onsite, nearshore, or offshore components within our Global Delivery Network.

By tapping into multiple locations to deliver on a project, customers gain the benefit of accelerated development on their solutions. This can mean having Avanade project teams making progress on your project beyond regular business hours, depending on the location of team members. Multi-site delivery can also bring additional cost benefits for the customer. And because all Avanade teams utilize standard methodologies and tools for delivery, customers receive consistent, high-quality results regardless of team locations.

Featured Case Study: GroupM

Avanade helped GroupM develop a media management solution, MediaFlow, designed to plan, track and manage global media campaigns, as well as collaborate with clients' software. Avanade consultants, both in the US and in the India Development Center, deployed the solution which uses the Microsoft® .NET Framework and the Microsoft SQL Server™ 2000 Enterprise Edition database software.
